

ERCOTPOWER

Scope: These rules shall apply to each Contract within the Class.

Underlying: The Underlying for this Contract is the <measure> power price at <ERCOT power hub>, as published by the Electric Reliability Council of Texas, Inc. (ERCOT) or calculated from the hub prices published by ERCOT, for intervals occurring <time period>. Revisions to the Underlying made after Expiration will not be accounted for in determining the Expiration Value.

Instructions: The Underlying can be found at: <https://www.ercot.com/mp/data-products/data-product-details?id=NP6-905-CD>. These instructions on how to access the Underlying are provided for convenience only and are not part of the binding Terms and Conditions of the Contract. They may be clarified at any time.

Source Agency: The Source Agency is the Electric Reliability Council of Texas, Inc. (ERCOT)..

Type: The type of Contract is an Event Contract.

Issuance: The Contracts are based on the outcomes of recurrent events. Contract iterations will be issued on a recurring basis, and Contract iterations will generally correspond to each successive calendar week and calendar month.

<measure>: <measure> refers to the price measure for <ERCOT power hub> specified by the Exchange, which may be either (i) a price measure published directly by ERCOT for <ERCOT power hub>, or (ii) a measure calculated from the Settlement Point Prices (SPPs) published by ERCOT for <ERCOT power hub>. <measure> identifies the market (real-time or day-ahead), the hour block (all-hours, on-peak, or off-peak), and either a statistic (an arithmetic average, a maximum, or a minimum) or an individual interval price. Examples include “all-hours average real-time,” “on-peak average real-time,” “off-peak average day-ahead,” “maximum 15-minute real-time,” “minimum hourly day-ahead,” and “15-minute real-time.” The Exchange may list iterations of the Contract corresponding to variations of <measure>.

<ERCOT power hub>: <ERCOT power hub> refers to a trading hub in the ERCOT region for which ERCOT publishes Settlement Point Prices, identified by the hub name and Settlement Point name published by ERCOT, as specified by the Exchange (e.g., “ERCOT North Hub” (HB_NORTH), “ERCOT Houston Hub” (HB_HOUSTON), “ERCOT South Hub” (HB_SOUTH), “ERCOT West Hub” (HB_WEST), “ERCOT Panhandle Hub” (HB_PAN), or “ERCOT Hub Average” (HB_HUBAVG)). Load zones, resource nodes, and individual electrical buses are not trading hubs. The Exchange may list iterations of the Contract corresponding to variations of <ERCOT power hub>.

<above/below/exactly/at least/at most/between>: <above/below/exactly/at least/at most/between> refers to comparison operators specified by the Exchange. “Above X” means strictly greater than X ($>X$). “Below X” means strictly less than X ($<X$). “Exactly X” means equal to X ($=X$), measured to the precision specified elsewhere in the Contract. “At least X” means greater than or equal to X ($\geq X$). “At most X” means less than or equal to X ($\leq X$). “Between X and Y” means greater than or equal to X and less than or equal to Y ($\geq X$ and $\leq Y$), i.e., inclusive of both endpoints, unless otherwise specified. The Exchange may list iterations of the Contract corresponding to variations of <above/below/exactly/at least/at most/between>. Where the Contract specifies a <time period>, “At least X” and “At most X” require the applicable value to satisfy the comparison criterion at every point <time period>, such that at no point <time period> is the value less than X or greater than X, respectively, unless otherwise specified by the Exchange. “Above X,” “Below X,” “Exactly X,” and “Between X and Y” require the applicable value to satisfy the comparison criterion at least once <time period>, unless otherwise specified by the Exchange.

<value>: <value> refers to a price level (or, where <above/below/exactly/at least/at most/between> is “between,” a pair of price levels) specified by the Exchange, rounded to two decimal places and expressed in <unit>, unless otherwise specified by the Exchange. The Exchange may list iterations of the Contract with <value> levels that fall within an inclusive range beginning at negative one thousand dollars ($-\$1,000.00$) per megawatt-hour and ending at ten thousand dollars ($\$10,000.00$) per megawatt-hour, at consecutive increments of one cent ($\$0.01$) per megawatt-hour (or the equivalent levels in any other

unit specified by the Exchange). Due to the potential for variability in the Underlying, the Exchange may modify <value> levels in response to suggestions by Members.

<unit>: <unit> refers to the unit of price measurement in which <value> is expressed, as specified by the Exchange. Unless otherwise specified by the Exchange, <unit> is U.S. dollars per megawatt-hour (e.g., “\$/MWh” or “dollars per megawatt-hour”), the unit in which ERCOT publishes Settlement Point Prices. If the Exchange specifies another unit of price (e.g., “cents per kilowatt-hour”), the applicable price published in dollars per megawatt-hour is converted to that unit at its exact conversion factor (one (1) dollar per megawatt-hour equals one-tenth (0.1) of one cent per kilowatt-hour), without intermediate rounding. The Exchange may list iterations of the Contract corresponding to variations of <unit>.

<time period>: <time period> refers to a specific range of time as specified by the Exchange. This may be defined by exact dates (e.g., “between January 1, 2026, and December 31, 2026”), relative markers (e.g., “before July 1, 2027”), an event, or broader intervals (e.g., “Q1–Q2 2027,” “January–March 2026”). “Between” is inclusive of both endpoints, while “before” and “after” exclude the specified date unless stated otherwise. <time period> may also refer to “Any” or “None,” to multiple dates (even if non-consecutive), or to a singular and discrete date or time.

Payout Criterion: The Payout Criterion for the Contract encompasses the Expiration Values that the <measure> power price at <ERCOT power hub> is <above/below/exactly/at least/at most/between> <value> <unit> <time period>.

Additional Clarifications:

Calculation of <measure>:

- The Underlying is determined solely from prices published by ERCOT for <ERCOT power hub>. The price for each interval is the Settlement Point Price (SPP) published by ERCOT for <ERCOT power hub>, inclusive of any price adder or other component that ERCOT incorporates into that Settlement Point Price.
- Where <measure> refers to real-time prices, the applicable prices are the fifteen-minute real-time SPPs for <ERCOT power hub> published in ERCOT’s Settlement Point Prices at Resource Nodes, Hubs and Load Zones report (NP6-905-CD). Where <measure> refers to day-ahead prices, the applicable prices are the hourly day-ahead SPPs for <ERCOT power hub> published in ERCOT’s DAM Settlement Point Prices report (NP4-190-CD). Unverified, estimated, indicative, or forecast prices (including ERCOT’s five-minute Security-Constrained Economic Dispatch (SCED) locational marginal prices, its indicative real-time prices, and any price forecast) are not used.
- Where <measure> is an average (e.g., “all-hours average real-time”), it is the simple, unweighted arithmetic mean of the applicable prices of <ERCOT power hub> for every applicable interval (each fifteen-minute settlement interval, for real-time prices, or each hourly interval, for day-ahead prices) in the applicable hour block occurring <time period>. No load, volume, or other weighting is applied.
- Where <measure> is a maximum or minimum (e.g., “maximum 15-minute real-time”), it is the single highest or lowest applicable price of <ERCOT power hub> among all applicable intervals in the applicable hour block occurring <time period>.
- Where <measure> is a measure published directly by ERCOT for <ERCOT power hub> (e.g., an average price published by ERCOT), the value is taken as published, without recalculation.
- Every value compared to <value>, including an individual hourly price, maximum, or minimum, is computed in <unit> using the full precision of the prices published by ERCOT and rounded to two decimal places in <unit> only after the calculation is complete, unless otherwise specified, with exact half values rounded away from zero (e.g., 50.005 to 50.01 and –50.005 to –50.01).
- Negative prices are valid prices and are included in any calculation at their published negative value. Prices are used as published by ERCOT, including any shortage, scarcity, or administratively determined pricing, price adder, or price cap applied by ERCOT, without adjustment.
- Where <measure> yields a single value covering all intervals occurring <time period> (including any average, maximum, or minimum), the comparison specified by <above/below/exactly/at least/at most/between> is applied once to that single value, and the provisions of the definition of <above/below/exactly/at least/at most/between> concerning satisfaction of the comparison criterion at every point <time period> or at least once <time period> do not apply.

Where <measure> is an individual interval price (e.g., “15-minute real-time”), those provisions apply to each applicable price of <ERCOT power hub> occurring <time period>.

- Forecasts, projections, or announcements of expected prices for <ERCOT power hub>, whether by ERCOT or any other person, are not the Underlying; only prices actually published by ERCOT for intervals occurring <time period> are used.

Hours and Intervals:

- <time period> and all hour blocks are determined in Central Prevailing Time (CPT), the time convention in which ERCOT publishes its Settlement Point Prices, and each interval is assigned to <time period> according to the Operating Day (delivery date) to which ERCOT assigns it, using ERCOT’s published delivery hour (hour ending) and delivery interval designations. On days on which daylight saving time begins or ends, every interval published by ERCOT for that day (twenty-three (23) or twenty-five (25) hourly intervals, or ninety-two (92) or one hundred (100) fifteen-minute settlement intervals, as applicable) is included.
- Unless otherwise specified by the Exchange, “all-hours” (or “around-the-clock”) means every interval; “on-peak” means the intervals within the hours ending 7:00 a.m. through 10:00 p.m. CPT (hours ending 7 through 22), Monday through Friday, excluding North American Electric Reliability Corporation (NERC) holidays; and “off-peak” means every interval that is not on-peak.

Hub Status and Data Availability:

- If <ERCOT power hub> is renamed, re-identified (including by assignment of a new Settlement Point name), or its constituent hub buses or weightings are modified by ERCOT <time period>, but ERCOT continues to publish prices for <ERCOT power hub> under the same or a successor hub name or Settlement Point name reflecting the continuation of that hub’s price record, that continued record governs.
- If, by the Expiration Date, ERCOT has not published an applicable price for every interval of <ERCOT power hub> required by <measure>, <measure> is determined from the intervals for which an applicable price has been published, provided that prices have been published for at least ninety-five percent (95%) of the required intervals; otherwise, there is no reliable data for the Underlying, and the no-data rule below governs. Notwithstanding the foregoing, if the published prices alone definitively establish whether the Payout Criterion is satisfied regardless of the value of any unpublished interval, the Contract will resolve on the basis of that data.
- If ERCOT permanently ceases to publish prices for <ERCOT power hub> and there is no successor hub as described above, each interval for which no applicable price has been published is treated as unpublished under the preceding clarification.
- If ERCOT suspends its real-time or day-ahead market for any period and publishes prices for <ERCOT power hub> for that period that were determined administratively or under emergency procedures, those published prices are used as published.

Source and Corrections:

- The applicable price for each interval is the first price published by ERCOT for that interval in NP6-905-CD or NP4-190-CD, as applicable, unless otherwise explicitly specified by the Exchange. For any such specified iteration of the price, a later version of that price (as reflected in the version number and current-row fields of those feeds) governs only if published before Expiration and the Exchange determines, in its sole discretion, that it remedies a material error; corrections, retractions, or removals published after Expiration are disregarded.
- If the Exchange determines, in its sole discretion, that a published price contains a material error, it may delay Expiration until the earlier of (i) publication of revised data or (ii) the Expiration Date.
- If no reliable data is available by the Expiration Date, all markets will resolve to the last fair price, as determined by the Exchange in its sole discretion, unless a “No data” strike is listed, in which case the “No data” strike will resolve “Yes” and all others will resolve “No”.

Examples that would resolve the market to Yes:

Assuming <measure> is “all-hours average real-time,” <ERCOT power hub> is “ERCOT North Hub,” <above/below/exactly/at least/at most/between> is “above,” <value> is “50.00,” <unit> is “dollars per megawatt-hour,” and <time period> is “in

November 2026”:

- The arithmetic mean of ERCOT’s real-time Settlement Point Prices for ERCOT North Hub across all two thousand eight hundred eighty-four (2,884) fifteen-minute settlement intervals in November 2026 is 54.37. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve Yes, because 54.37 is strictly greater than 50.00.
- Several intervals in November 2026 settle at negative prices, and the mean of all intervals, including those negative prices at their published values, is 51.02. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve Yes, because negative prices are included as published and 51.02 is above 50.00.
- ERCOT assigns North Hub a new Settlement Point name partway through November 2026 and continues its price record under that successor name, and the mean across the full month is 58.10. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve Yes, because the continued record governs and 58.10 is above 50.00.
- ERCOT has published real-time prices for North Hub for two thousand eight hundred sixty (2,860) of the two thousand eight hundred eighty-four (2,884) fifteen-minute settlement intervals by the Expiration Date, and the mean of those published prices is 55.10. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve Yes, because prices were published for at least ninety-five percent (95%) of the required intervals and 55.10 is above 50.00.

Examples that would NOT resolve the market to Yes:

Assuming <measure> is “all-hours average real-time,” <ERCOT power hub> is “ERCOT North Hub,” <above/below/exactly/at least/at most/between> is “above,” <value> is “50.00,” <unit> is “dollars per megawatt-hour,” and <time period> is “in November 2026”:

- The arithmetic mean of the applicable prices for ERCOT North Hub across all intervals in November 2026 is 43.88. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve No, because 43.88 is not above 50.00.
- The arithmetic mean, rounded to the nearest cent, is exactly 50.00. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve No, because “above” requires a value strictly greater than 50.00.
- North Hub’s real-time Settlement Point Price exceeds 300.00 in several intervals during a cold snap, but the mean across all intervals is 47.15. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve No, because the Contract settles on the average across all intervals rather than on any individual interval.
- ERCOT has published real-time prices for North Hub for only two thousand four hundred (2,400) of the two thousand eight hundred eighty-four (2,884) fifteen-minute settlement intervals by the Expiration Date, and the mean of those published prices is 51.00. The Contract for the all-hours average real-time power price at ERCOT North Hub above 50.00 dollars per megawatt-hour in November 2026 will resolve to the last fair price, as determined by the Exchange in its sole discretion, because prices were published for fewer than ninety-five percent (95%) of the required intervals and the published prices alone do not establish the outcome.

If a natural person who is the primary subject of a Contract’s Underlying or Payout Criterion dies prior to Expiration, or if an act or attempted act of violence, assassination, or terrorism directly prevents, interrupts, or causes the event that is the primary subject of a Contract’s Underlying or Payout Criterion, Kalshi may, in its sole discretion, settle the Contract at the last traded price prior to the death or act. If Kalshi determines that trading activity was materially affected by the circumstances giving rise to the death or act, Kalshi may instead use the last traded price prior to such circumstances becoming known or reasonably anticipated by market participants. For purposes of this Rule, Kalshi may rely on an approximate time where the precise time is unknown or cannot be reasonably determined. If Kalshi determines that no last traded price represents a fair settlement, the Outcome Review Committee shall determine the fair settlement price. Kalshi may halt or pause trading in any such Contract (with public notice on Kalshi’s website or the Platform) if it reasonably believes that a death or act of terrorism subject to this Rule has occurred, is imminent, or that circumstances giving rise to

such an occurrence may be happening. Determinations of Kalshi and the Outcome Review Committee under this Rule are final and not subject to review.

Minimum Tick: The Minimum Tick size for the Contract shall be \$0.01.

Position Accountability Level: The Position Accountability Level for the Contract shall be \$25,000 per strike, per Member.

Last Trading Date: The Last Trading Date of the Contract will be the final day of <time period>, or, where <measure> refers to day-ahead prices, the day before the final day of <time period>. The Last Trading Time will be one minute prior to the end of <time period>, or, where <measure> refers to day-ahead prices, 11:00 AM ET on the Last Trading Date.

Settlement Date: The Settlement Date of the Contract shall be no later than the day after the Expiration Date, unless the Market Outcome is under review pursuant to Rule 7.1.

Expiration Date: The latest Expiration Date of the Contract shall be one week after the final day of <time period>. If an event described in the Payout Criterion occurs, expiration will be moved to an earlier date and time in accordance with Rule 7.2.

Expiration time: The Expiration time of the Contract shall be 10:00 AM ET.

Settlement Value: The Settlement Value for this Contract is \$1.00.

Expiration Value: The Expiration Value is the value of the Underlying as documented by the Source Agency on the Expiration Date at the Expiration time.

Contingencies: Before Settlement, Kalshi may, at its sole discretion, initiate the Market Outcome Review Process pursuant to Rule 7.1 of the Rulebook. If an Expiration Value cannot be determined on the Expiration Date, Kalshi has the right to determine payouts pursuant to Rule 7.1 in the Rulebook.

APPENDIX B – TRADING PROHIBITIONS

In addition to the general prohibition against trading on material nonpublic information, the Exchange will institute additional prohibitions for trading the contract. Persons under 18 years of age are not permitted to create Kalshi accounts. The following individuals will be prohibited from trading:

- Any employee, officer, contractor, or agent of the Electric Reliability Council of Texas, Inc. with access to material nonpublic information relating to the calculation, publication, or correction of the Settlement Point Prices published for <ERCOT power hub>, including personnel of its market operations, grid operations, market settlements, and market data functions.
- Any employee, officer, contractor, or agent of the Independent Market Monitor for the ERCOT wholesale market with access to material nonpublic information relating to prices at <ERCOT power hub>.
- Any person who otherwise has the ability to influence, or has advance knowledge of, the prices published by ERCOT for <ERCOT power hub> for intervals occurring <time period>, including any person with advance knowledge of the publication or correction of those prices.
- The immediate family members and members of the same household of any person described above
